

What's new in Signage

Sustainable signage with Recyclable Board

Recyclable Board is a great eco-friendly solution for event, exhibition, and display signage.

The uniquely strong & rigid paperboard design is highly versatile, allowing Recyclable Board to be cut and folded into just about any shape imaginable. It's engineered fluted core gives it ultimate durability, whilst the pristine white surface allows for any colour to be neatly printed onto it.

Recyclable Board also comes with a kraft face if you are looking for a premium cardboard look.

It is easy to transport, assemble and disassemble. Making it ideal for display advertising, point of sale marketing and a great solution for exhibitions and fairs.

Applications

Recyclable Board offers a great eco-friendly alternative solution for just about anything you can think of. It has the versatile capability to be manufactured into chairs, custom stands, and dozens of other applications.

Environmentally friendly

Recyclable Board is the most environmentally friendly board of its kind. Containing no harmful components and utilising water-based adhesives means it can be recycled as paper or cardboard. Being so lightweight, it also reduces the carbon footprint generated during transport. The high-quality fibres mean it can be reused multiple times depending on care level.
